Medical reports are provided from 10 acute care case studies, each of which concerns an in-patient person with specific medical problems. Students will be involved in the care of the patient from the date of admission to the date of discharge. Medical reports include the following: correspondence, emergency department reports, history and physical examination, diagnostic imaging/radiology reports, operative reports, pathology reports, consultations, death summaries, and discharge summaries.

Student Learning Outcomes for the Course:

- Increase student knowledge of medical terminology

- Students will transcribe various forms of medical documents and forms using audio presentations
